

## SOGETI GERMANY

**Sogeti Deutschland GmbH** is part of the international Capgemini organisation. We specialise in software testing and software quality assurance. Sogeti Deutschland GmbH supports you as a partner from the design to the implementation of test solutions. Our starting point are your company goals and potential risks.

Sogeti employs more than 2.500 test specialists who are familiar with methods for structured testing such as TMap® - the Sogeti test management approach.

TMap® is a comprehensive concept for structured testing which is built on four cornerstones:

- a lifecycle model - the framework for all test activities
- supporting test methods and techniques
- test tools and test infrastructure - test automation and the necessary test environment
- organisation and management of your test process

TMap® contains a huge collection of methods and techniques for all test activities and thus offers the necessary building blocks for a tailor-made test approach for your organisation.

TMap® has meanwhile become an international standard for software testing and is used by more than 500 companies throughout Europe.

Sogeti is also the inventor of the TPI® (test process improvement) method for step by step optimisation of test processes.

TPI® enables an objective assessment of the test maturity of your organisation or your test project  
a proven prioritisation of optimisation steps  
a step by step optimisation based on the actual test maturity and specific goals the individual selection out of a variety of proven optimisation advises.

Besides TMap® and TPI® also the following methods are available:

- TAKT - the Sogeti approach for test automation
- TSite - the Sogeti approach for building and running a test service center
- TEmb - the Sogeti approach for testing embedded software
- TMapFactory - the Sogeti approach for test outsourcing.

Our own R&D department VINT takes care of the continuous development of our test services. Topics such as object orientation, client/server, graphical user interfaces, ERP software, components, Internet, e-Business, multimedia and embedded systems are therefore investigated thoroughly. New test solutions are added to and integrated in TMap®.

Our employees support you with the implementation of a structured test approach, test automation, optimisation of your test process, test management and test realisation. Furthermore Sogeti offers services for the design and implementation of quality assurance in your organisation.

Our customers are financial institutions, telecommunication companies, trade, industry, logistic companies and government institutions. We are a trendsetter in our market segment and are often present as speaker on international congresses and workshops.

Our methods are also published in German language:

Test Management und Testprozess Optimierung - ein praktischer Leitfaden für erfolgreiches Testen von Software mit TPI® und TMap®, 2<sup>nd</sup> edition, March 2002 by Martin Pol, Tim Koomen and Prof. Andreas Spillner.

TMap® Next, 2007, by Tim Koomen, Leo van der Aalst, Bart Broekman, Michiel Vroon.

November 2009: Business driven TPI®.
