

Capgemini Group's TMAP® Integration with Oracle Application Testing Suite

Performance driven. Quality assured.

The integration of TMAP® with Oracle Application Testing Suite 9.2 significantly reduces the cost and complexity of deploying Oracle environments.

Business Drivers

Enterprises often are caught in the balancing act between reducing the complexity of application testing with the constant drive to accelerate delivery of products and services into the market. Testing enterprise applications is fraught with challenges such as insufficient testing expertise and undetected errors that are caught too far in the software development cycle. Enterprises often turn to firms like Capgemini Group (Capgemini and Sogeti) with a specialist Quality Assurance and testing discipline to help architect best practices within testing and verification to achieve business goals.

Unique Business Value

The combination of Capgemini Group skills and Oracle applications and technology provides an end-to-end solution comprised of people, processes and technology, to help companies make the right decisions to resource their software development projects. Specifically, Capgemini Group has a global population of testing professionals and test automation experts able to support in the Oracle applications environment.

Capgemini Group's leading business-driven Test Management approach, TMap® developed by Sogeti, is now integrated with Oracle Application Testing Suite 9.2, a key component of Oracle Enterprise Manager's suite of Application Quality Management products, and its overall business-driven IT management approach.

Oracle Application Testing Suite provides an integrated solution for load testing, functional testing and test management, enabling customers to thoroughly test applications and their

underlying infrastructure, to help ensure optimum quality, scalability and availability prior to deployment.

This single, unified offering is battle-tested within Capgemini Group's Oracle Software Testing Center of Excellence. Customers can now benefit from our partnership to achieve consistent quality in test management and quantifiable cost reductions in software development and maintenance projects.

In addition, Capgemini Group's team of professionals can help enterprises architect a holistic Master Test Plan to achieve business objectives, starting from concept to implementation. Finally, Capgemini Group has incorporated Oracle's Application Quality Management portfolio into its Lifecycle Testing Service for Oracle service to ensure ongoing test management and maintenance, as new functionality or release updates are added into software development projects.

Solution Benefits

Strategic Oracle Partners, such as the Capgemini Group, recognize the impact of Oracle's strategy for Application Quality Management (AQM). For example, development teams using Oracle solutions such as Oracle Real Application Testing and Oracle Application Testing Suite have reduced scripting time by up to 90% and cut testing time from weeks to hours.

Oracle enables these productivity gains by providing unique capabilities, such as testing accelerators for Oracle technology, integrated manageability in Oracle target systems, and sample regression test scripts (Test Starter Kits) for Oracle Applications.

Oracle Corporation also provides database testing using real workloads; an easy to learn and use, testing solution, powerful Java-based scripting extensibility and a single integrated scripting platform for automated functional and load testing.

Integration Details

TMap, the Group's renowned structured testing methodology, based on Sogeti research and user experience, provides a complete tool box for setting up and executing tests, including detailed and logical instruction to testers. This systematic test approach provides standardization and measurable business benefits to customers, such as shorter testing periods in the total software development cycle, comprehensive insight into the risks associated with software quality, and re-use of test process deliverables.

Oracle Application Testing Suite 9.2 has out-of-the-box TMap project creation based on pre-defined templates for TMap projects, to help developers and QA professionals reduce the time associated with template creation.

Integrated Features

- Users can create new schemas/connections based on a TMap template
- For TMap-based schemas, the TMap fields, reports and, if selected, sample data will be available 'out of the box'
- Users can specify their own customized image that will appear on the reports they view from Oracle Test Manager

About Capgemini and Sogeti

The Capgemini Group is one of the world's foremost providers of consulting, technology and outsourcing services, enabling its clients to transform and perform through the use of technologies. Present in over 30 countries, the Capgemini Group reported 2009 global revenues of EUR 8.4 billion and employs 95,000 people worldwide. Sogeti, its wholly-owned subsidiary, is a leading provider of local professional services, bringing together more than 20,000 professionals in 15 countries and is present in over 100 locations in Europe, the US and India.

Together, Capgemini and Sogeti have developed innovative, business-driven quality assurance (QA) and testing services, combining best-in-breed testing methodologies (TMap® and TPI®) and the global delivery model, Rightshore®, to help organizations achieve their testing and QA goals. Capgemini and Sogeti have one of the largest dedicated testing practices in the world, with over 6,400 test professionals and a further 11,000 application specialists, notably through a common center of excellence with testing specialists developed in India.
